BREAST CANCER DETECTION

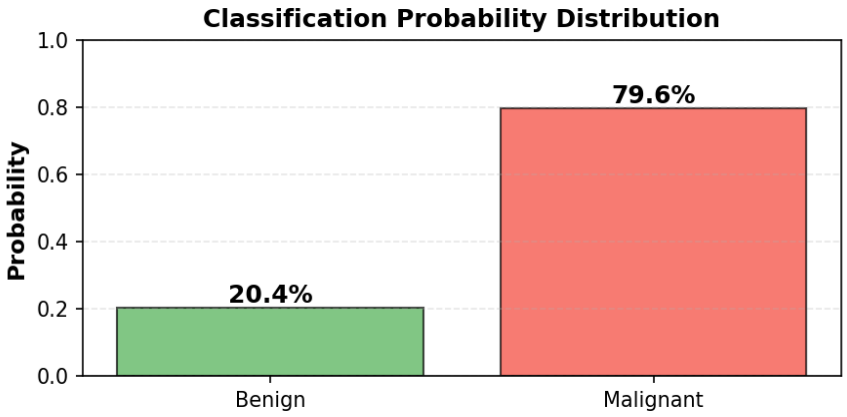

AI-Assisted Histopathology Analysis Report

Report ID:	BCR-20260326_150213
Generated:	2026-03-26 15:02:14
Patient ID:	N/A
Image File:	tmpy163zdp9.png

DIAGNOSTIC RESULTS

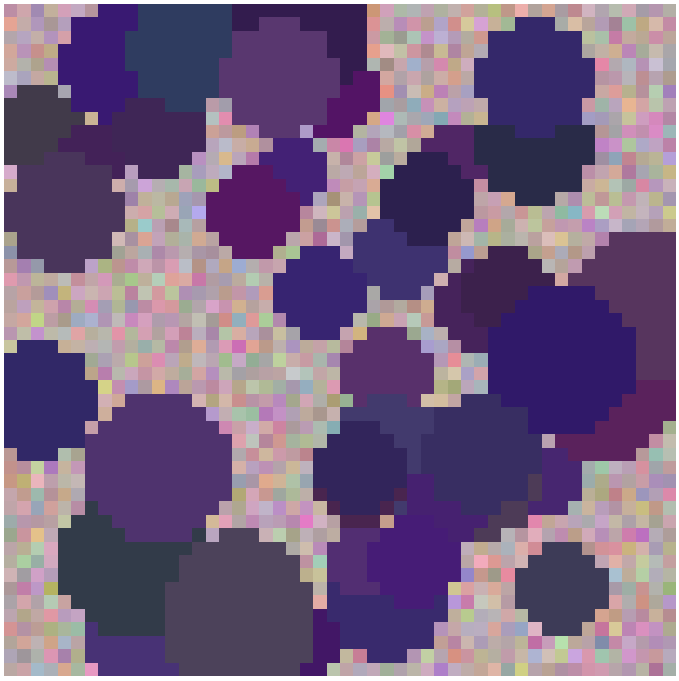

Classification:	**MALIGNANT**
Confidence Score:	79.6%
Benign Probability:	20.4%
Malignant Probability:	79.6%

Probability Distribution

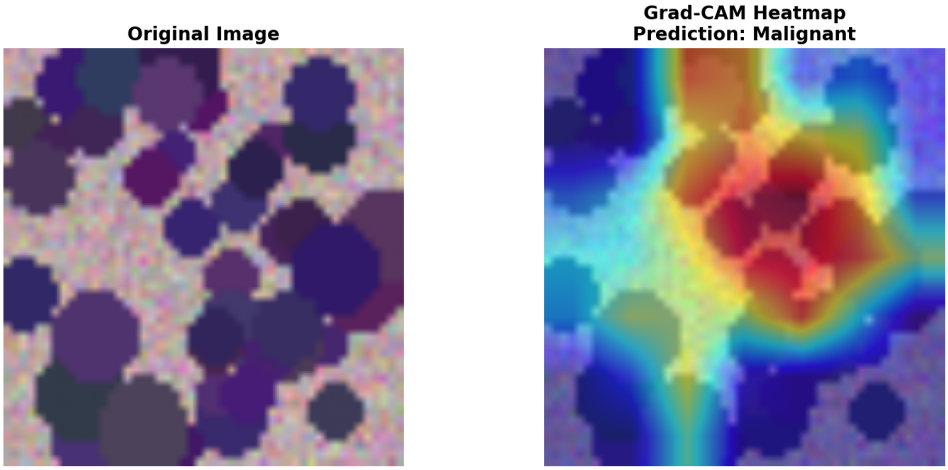

HISTOPATHOLOGY IMAGE ANALYSIS

Original Histopathology Image

Explainability: Grad-CAM Heatmap

The heatmap below highlights the tissue regions that most influenced the AI's decision. Red/yellow areas indicate high importance, while blue areas indicate low importance.

CLINICAL RECOMMENDATIONS

■■ RETEST AND SPECIALIST REVIEW RECOMMENDED. Moderate confidence malignant detection requires verification. Schedule immediate appointment with specialist for comprehensive evaluation. Additional imaging, biopsy, or pathological examination strongly advised to confirm findings and rule out false positive.

Risk Level:	**HIGH**
Follow-up Timeline:	Immediate (within 24-48 hours)
Specialist Referral:	Oncologist and Pathologist

IMPORTANT MEDICAL DISCLAIMER

This report is generated by an AI-assisted diagnostic system and is intended for decision support purposes only.

Key Points:
• This analysis must be validated by qualified medical professionals
• Do NOT make treatment decisions based solely on this AI analysis
• Always consult with board-certified pathologists and oncologists
• This system is not a substitute for professional medical judgment
• False positives and false negatives can occur
• Clinical correlation and additional diagnostic tests are essential

Regulatory Status:
This AI system is for research and educational purposes. It has not been approved by regulatory agencies (FDA, CE, etc.) for clinical diagnostic use.

Professional Review Required:
All findings must be confirmed through standard pathological examination and clinical evaluation by licensed healthcare providers.

TECHNICAL DETAILS

Model Architecture: ResNet50 with Transfer Learning
Training Dataset: Histopathology images (Benign/Malignant classification)
Input Image Size: 224 × 224 pixels
Preprocessing: ImageNet normalization
Explainability Methods: Grad-CAM, SHAP, Integrated Gradients
Software Version: Breast Cancer Detection System v1.0
Processing Timestamp: 2026-03-26 15:02:14

This report was automatically generated by the AI-Assisted Breast Cancer Detection System. For questions or concerns, please consult with your healthcare provider.
